

ELECTRONIC TRUCK INTERFACE

DIRECTLY INTERFACE YOUR TRUCK METER WITH YOUR HANDHELD DEVICE

The Mango Electronic Truck Interface is a powerful module that connects with your truck meter to directly transfer data to and from your Mango Mobile handheld. This allows for a seamless, error-free connection to send information to your meter and also collect sales data (gallons pumped) with minimal user input.

AFFORDABLE

- ✓ One-time charge of \$495 per truck
- ✓ No monthly costs
- ✓ Includes all hardware & software

HOW IT WORKS

The LCR II (or TSC 3000) is a durable and reliable meter that is compatible with this module and our Mango software. The Bluetooth then communicates with your handheld so you have an accurate and precise reading to eliminate error and help your drivers do more stops per day.

FAVORITE FEATURES

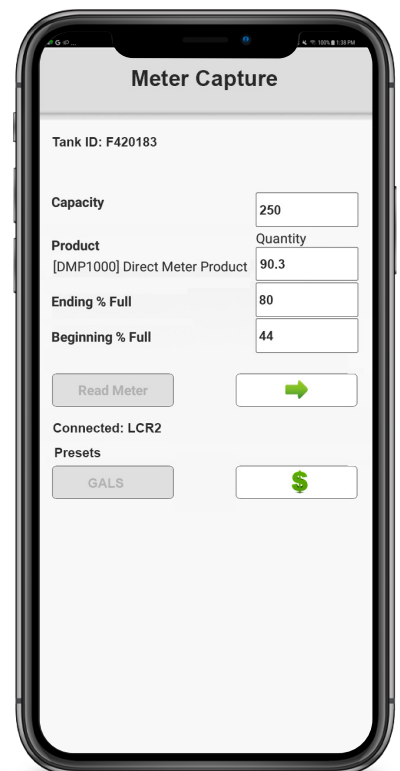

Enter Exact Amounts – From your Mango mobile device, you can choose to enter pre-set values for either a gallon amount or a fixed price.

Automatic Pump Stop – Each time you pump gas, Mango controls the pumping of the gas and interacts with the meter directly so it can stop the pump at the precise moment.

Minimal User Input – All you have to manually enter is the ending percentage full of your bulk tank.

Accurate Data – Values are calculated automatically based on the driver's input, to ensure that data on tickets is accurate.

Print or Email Tickets – You can choose to print from either your current truck printer (Epson impact) or use a portable thermal printer. You can even send the ticket via email instead of printing a hard copy.

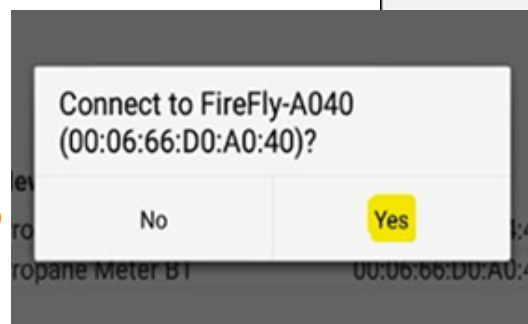

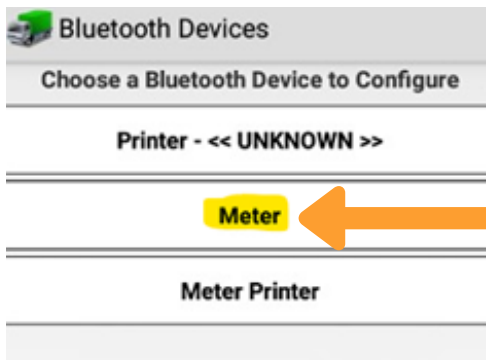

GET UP AND RUNNING QUICKLY

The Mango ETI kit includes a class I Bluetooth adapter with all of the wiring pre-set for you.

1. Simply open the face of your meter and exchange the terminal block.
2. Then, take the single red wire and screw it into one section of the block - we even give you a Mango screwdriver to make it easy for you.
3. Tuck the wires back in and you are on your way.

The software install only takes 90 seconds and once ETI is installed, you simply do a software pairing between the device and your handheld. That's all there is to it!
