MANGO REMOTE TANK MONITORING

COLLECT DATA DIRECTLY FROM CUSTOMER TANKS TO OPTIMIZE ROUTE PLANNING

COMPATIBLE WITH SEVERAL TANK MONITORS

- OtoData (preferred)
- DD Gas Devices
- Owl
- Tank Utility
- Centeron

HOW IT WORKS

Mango Remote Tank Monitoring allows you to collect data directly from customer tanks and other devices. This data can then be used for important activities in your organization, such as for planning sales opportunities and optimizing delivery routes. We make it affordable for every propane company to monitor their customers with smart technology.

- Add monitor serial numbers into Mango to associate it directly with the tank information.
- Remotely monitor tank levels to keep customers happy by keeping their tanks full.
- Never miss a delivery. Set alarm levels in Mango such as Critical, Low or High to ensure you never miss a delivery or equipment service appointment.
- Auto-create orders for when the tank falls below a specific level, and send SMS notification to your customer to prompt for confirmation.

AUTOMATE MONITORING FOR UP-TO-DATE DATA

Set up how often you want to pull data from the tank monitor. You can set it to update daily, or for example, any time there is a change of more than 10% in the tank percentage level, or even if there is a low battery on the monitor itself.

Nee-Vo.com
